

Summer Comfort is on its Way!

As summer approaches are you reminded how muggy it can get overnight while sleeping? Too hot upstairs? Too humid? Can't sleep? There is a cost effective solution for that. The **iSolar Powered Attic Fan (SPAF)**.

Attic temperatures can reach 135 F degrees which transfers downward into the home unless adequately vented to the outdoors. The SPAF will break down the wall of heat between floors in your home. Installing the SPAF will cool your house for free as the attic fan is activated with solar power. Contact your local electric utility about discount programs for the **iSolar Powered Attic Fan**.

Energy bill too high? Want to save money? We have a solution for that. By harvesting the sun's energy, the iSolar attic fan does not need electricity, batteries or maintenance. Once installed you don't touch it for the next 20 years...and it saves you money every year by reducing energy you spend on your air conditioner. Our solar powered attic fan will pay for itself in about 3 years leaving the next 17 years for cool savings in your pocket.

Extending Life of your air-conditioner

Air conditioners are expensive to buy and operate. iSolar has a solution for that. Our solar powered attic fan is your air conditioner's best friend and here's why: once our solar attic fan is installed (takes 15 minutes to install) your air conditioner will be utilized up to 20% less due to the performance of our SPAF. What does that mean? That means your expensive air conditioner unit works a lot less resulting in a much longer life and less repairs. It also means that you may not even need your air conditioner on some summer days....that's cool savings for you and less work for your air conditioner.
